5 April 1963

MEMORANDUM FOR THE RECORD:

SUBJECT: DCI Morning Meeting

0	_	V	4	
/	ວ	Λ	П	

	1.		reported	that Secretar	y Talbot is		at the
end	of t	his mo	mth to try	to work out		policies	relative to
the	Per	sian G	ulf area.				

25X1

2. Apparently the Lunik shot is going to pass close to the moon and not impact. It is not clear at this time whether it will orbit around the moon or be a miss. Mr. McCone indicated that there was high level concern about the U.S. manned lunar program and requested Mr. Kent to look at the estimate in light of the most recent shot. He also requested GMAIC (later changed to OSI) to present information on what could be accomplished by instrumentation on the moon and what could be accomplished by having an actual man there.

25X1

4. DCI indicated that he would be seeing Mr. McCloy next Tuesday. McCloy has been asked to review our disarmament policies and, particularly, the status of our test ban negotiations. DCI indicated that he had given his personal views to the President that our present position want too far in terms of safeguards and that he felt an agreement would not be particularly useful relative to the nth country problem since the Soviets have no control over China and we have no control over DeGaulle. The President was inclined to agree but felt that we should continue to negotiate, although he wasn't very sanguine about any success.
